785. Is Bipartite Graph?

[[1,2,3], [0,2], [0,1,3], [0,2]] Input

O/P : False.

Algorithm -

Step 1 : Start.

Step 2 : Create a color array of size[n] filled with 0

Step 3 : Iterate through every node i from 0 to n-1 to handle disconnected graph.

Step 4 : If color[i] is not 0, ~~when start~~ skip to the next node in the loop.

Step 5 : Push node i into a BFS queue and set color[i] = 1

Step 6 : While the queue is not empty, pop the front node u.

Step 7 : For each neighbour v of u. it check its correct color.

Step 8: If color[v] is 0, set color [v] = -color[u] and add v to the queue

Step 9: If color[v] == color[u] return false, otherwise return true after all loop finishes.

Step 10: End.
